

Core Skills

Backend Development: Python, C#, .NET, ASP.NET Core, FastAPI, gRPC, MediatR, JWT, Entity Framework Core, AutoMapper, FluentValidation, Clean Architecture, N-Tier Architecture, RESTful API, API Documentation (Swagger)

Databases & Caching: PostgreSQL, Redis, Elasticsearch

Frontend Development: Swift, SwiftUI, UIKit, React, GraphQL

Version Control & Collaboration: Git, CI/CD, Postman, DBeaver, Azure Data Studio, GitHub, GitLab, Agile/Scrum, Azure, AWS

Work Experience

Software Instructor

Techcareer.net | Istanbul

IOS development trainings were given with Swift language

March 2025 - May 2025

Backend Developer

Papara & Patika | Bootcamp

Developed a fintech project using .NET Core. Implemented JWT auth, EF Core, Dapper, and Clean Architecture principles with a layered structure.

Jan 2024 - Apr 2025

Freelancer Software Developer

Freelancer

Delivered custom mobile and backend software solutions to individual clients.

Jan 2024 - Currently

TUBITAK Instructor

T3 Vakfı | Istanbul Software Instructor (Sundays only)

Sep 2024 - May 2025

Full Stack Development Intern

Kariyer.net | Istanbul

I actively developed with React and .Net core. I took part in updating the Techcareer.net web application with my team.

Nov 2024 - Jan 2025

Full Stack Development Bootcamp

Techcareer.net | Istanbul

Completed hands-on training in .NET Core (backend) and React (frontend) development.

Sept 2024 - Dec 2024

IOS Developer Intern

AYM Yazılım I worked as an IOS Developer. I actively developed with Swift and SwiftUI.

I took part in the development of an e-commerce platform's mobile application for IOS devices.

Aug 2023 - Nov 2023

Projects

OTS (Online Transfer System) Backend Project

Is a financial platform that enables users to perform money transfers and manage their accounts. The system offers features for user authentication, customer profile management and secure financial transactions, allowing users to create accounts, make EFT transfers and track their transaction history.

Sabat App Backend Project

It is a personal guide application where users can read and listen to the Holy Quran in different languages, follow their religious requirements by receiving prayer reminders, and track their habits/routines.

TO-DO List Backend Project

This project provides a scalable and secure backend infrastructure that facilitates users' task management, scheduling and team collaboration. Performance and maintainability are at the forefront with modern architecture and JWT-based authentication.

Personnel Expense Management Backend Project

In the Personnel Expense Management project, I carried out the tracking, categorization and reporting of personnel expenses in a web-based management system developed with .NET Core. I implemented basic features such as company and user management, payment transactions and document management in line with modern software architecture principles.

Blog Website Backend Project(Sweet Dictionary)

Designed a .NET Web API with EF Core following Clean Architecture. Built backend for a social dictionary platform with user management, content sharing, comments, and search features.

Secure JWT-Based Authentication System with .NET and PostgreSQL

Developed a secure JWT-based auth system using .NET, EF Core, and PostgreSQL. Applied SOLID principles with Repository Pattern. Used BCrypt for encryption and documented the API with Swagger UI.

Stock Management Backend Project

In this project, I developed a backend application that provides product and category management using C# language. I prepared the necessary infrastructure for users to track product stocks, create categories and perform basic operations on products.

Currency Converter App with Swift

This IOS app enriched with various panels with Restful API the current exchange rate and provides the user with the exchange rate information retrieved from the internet.

Social Media Question Application with Swift

With Swift language, a social media application is realised where students can ask questions, answer questions, add notes and search for resources.

Handicrafts with SwiftUI

Developed with SwiftUI, this application is an E-Commerce Mobile application that brings together people who sell handicraft products and users who want to buy these products. The data in this application is stored and used using Firebase.

Story Book App with Swift

Using TableView with Swift, an application containing fairy tales that children will read with fun has been realised.

Crazy Moles Game with Swift

This project called 'Crazy Moles' is written in Swift. The user earns points when clicking on randomly moving moles.

Education

Iskenderun Technical University

Bachelor's Degree Computer Engineering

Aug 2020 - Jun 2024

Certificates

BTK Academy C# Programming

BTK Academy

Turkcell Future Writers C# Training

Turkcell

Turkcell Future Writers Swift Training

Turkcell

Software and Technology School

Coderspace

International Efficiency Challenge Electric Vehicle Races

TUBITAK
